quickcode

HTS CLASSIFICATION · DUTY ANALYSIS · ENTRY ANALYSIS · CONTINUOUS MONITORING

Trade compliance you can defend

Quickcode is the trade compliance platform built for the people responsible for the accuracy and completeness of trade compliance data—whether inside the enterprise, at a trade consulting firm, or as a customs broker. It classifies and trues up your catalog, quantifies duty and trade remedy exposure, and keeps both accurate and defensible as regulations evolve.
Our AI accelerates. Experts stay accountable.

EXAMPLE CLASSIFICATION

Women's waterproof rain boot

6401.92.90.60

DUTY
37.5%

SECTION 301 (FORCED LABOR)
10%

See it on your own catalog.

01 Classify
AI proposes HTS codes from HTSUS, WCO notes, CROSS rulings, and ICPs, each with a confidence score and rationale.

02 Quantify
Calculates the full landed duty picture, base rate, Chapter 99 measures, AD/CVD, for today or any past date.

03 Monitor
Tracks HTSUS, Chapter 99, AD/CVD, and PGA changes, and alerts you when your products are affected.

04 Defend
A field-level audit trail records who changed a classification, when, and why, with full supporting rationale.

AI accelerates.
Experts stay accountable.

Quickcode combines AI with deterministic software to produce classifications you can trust. AI proposes candidate classifications and supporting rationale. Quickcode verifies regulatory facts against authoritative sources, validates every recommendation, and preserves a complete audit trail. The result is a reviewable, defensible classification - not a chatbot guess.

Your data stays yours: used only in your account and never used to train our models.

quickcode

CONTENT & COVERAGE

Anchored to primary sources — HTSUS, Schedule B, CBP CROSS, WCO notes, Chapter 99 remedies, AD/CVD, FTAs, and PGA flags across a dozen federal agencies — refreshed continuously.

BUILT FOR THE ENTERPRISE

Secure SSO, role-based approvals, isolated environments, and revocable API access, integrated with ERP, ACE, and your other systems.

One platform for the compliance team

Classification is where Quickcode starts, not where it ends - it also quantifies exposure, keeps an audit trail, reconciles filed entries, and manages classification across your entire catalog.

HS CODE AUDIT
An independent second opinion on any classification, with a confidence score and rationale.

PRODUCT DATABASE
Every item in your catalog is stored in a searchable, centralized database. Organize products by HTS hierarchy, save custom views, and export complete compliance data - including product images - to Excel.

TRADE REMEDIES
Quickcode automatically determines every applicable trade measure - including Section 301, 232, 201, AD/CVD, and other special duties - so you can understand duty exposure before products are imported.

PGA & E-FILING
Quickcode identifies applicable PGA requirements, distinguishes between possible and required filings, and flags products subject to CPSC e-filing.

ENTRY AUDIT
Reconciles filed entries, including broker files, against what you classified — line by line.

DUPLICATE DETECTION
Quickcode identifies products that appear to be the same but have been classified differently, grouping likely and possible matches so they can be reviewed and corrected in bulk

BULK OPERATIONS
Classify, audit, assign, approve, set codes and flags, or copy a full compliance profile across a filtered population in a single action.

INTEGRATIONS & INTAKE
Connect Quickcode to the systems you already use through REST APIs, scheduled file exchange/EDI, embedded UI, or monitored email, so product data flows automatically.

"With Quickcode, we can classify items in minutes and instantly calculate accurate tariff and duty costs. Setup was fast and easy, and the Quickcode team provided excellent support, transforming a once time-consuming task into an efficient, dependable process."
- John Oldham, Global Logistics & Transportation Manager, FIELD
